

[Virtualizer Vps Control Panel Nulled --](#)

The screenshot displays a control panel for a Virtual Private Server (VPS). On the left is a sidebar menu with categories like IP Pool (239), Servers (2), Storage (8), Plans (15), Users (22), and Media (16). The main content area shows server details for IP 193.204.107.200, including VPS count (24), CPU (22384), and Space (207 GB). It also lists server status (Online), uptime, kernel version, and allocated resources (RAM: 33280 MB, Bandwidth: 104 GB, Space: 207 GB). Below this is a 'Server Resources' section with four donut charts: CPU (86% used, 85.52% / 100%), RAM (58% used, 9169 MB / 15912 MB), Disk (77% used, 81.38 GB / 105.84 GB), and Bandwidth (100% used, 247.16 GB). A 'Server Options' section at the bottom provides quick access to Settings, VPS CPU Usage, VPS RAM Usage, Bandwidth, Reboot, VPS Backup Settings, and VPS Backups. A disclaimer at the bottom states: 'All respective logos used are trademarks or registered trademarks of their respective companies.'
